

Newsround Science Facts

Hello! Here is this week's letter! There is not aJust to inform you that there will be no letter next week as Year 6 is going on a residential trip.

Biodegradable Glitter Saves Christmas!

The scientists at Cambridge have come up with a new plastic-free glitter that is non-toxic, vegan and biodegradable, meaning it will

break down in the environment over time.

This glitter is said to be just as messy for us, but not messy enough to trouble the sea as it dissolves in water!

This glitter is made out of Cellulose and using cells from brightly coloured plants and fruits, the eco-friendly glitter still shines brightly with vibrant colours that shouldn't fade over time like normal glitter.

Apologies for the short newsletter this week, we couldn't find that much and we were running low on time,

From, Marilia & Alex.
